

## DOSSIER B SOLUTION

**Alexander:** I was at the grocery store, staring at the five electric cars powered by the two solar panels.

$$\rightarrow 5 \wedge 2 = 25 = Y \text{ (\#7)}$$

**Ben:** I was at the park on multiple occasions last morning – three I think – and only saw four geese walking there.

$$\rightarrow 3 * 4 = 12 = L \text{ (\#1)}$$

**Cameron:** When I was with my pets (five in total, minus the four mice who don't like the sun), I saw something suspicious at the post office.

$$\rightarrow 5 - 4 = 1 = A \text{ (\#5)}$$

**Dale:** Four fire trucks divided up 36th Street due to the smoke fumes near the diner.

$$\rightarrow 36 / 4 = 9 = I \text{ (\#2)}$$

**Evelyn:** I was near 9th Street and 2nd Avenue, a relic of older times in the city that I doubt has much crime.

$$\rightarrow 9 * 2 = 18 = R \text{ (\#4)}$$

**Fiona:** I had my one daughter plus one of my favorite neighbor's cats with me; we weren't close to the crime.

$$\rightarrow 1 + 1 = 2 = B \text{ (\#3)}$$

**Giovanna:** The ten sports cars at the town hall, in addition to the eight motorcycles behind them, were odd.

$$\rightarrow 10 + 8 = 18 = R \text{ (\#6)}$$
